Environmentally friendly

Concern for the long-term welfare of the environment is an important consideration in the design and manufacture of Fujitsu air-conditioning products. Not only are our units extremely efficient, leading to reduced electricity consumption, but we strive to develop manufacturing processes that are environmentally friendly. Most important, however, is our insistence on using refrigerants that are designed to help protect the ozone layer, rather than gradually destroying it. Refrigerants R410A and R407C are used in all Fujitsu products - the result is efficient and control of the indoor environment combined with a responsible attitude towards the natural environment outside.

- Energy-efficient operation
- Environmentally friendly manufacture
- Ozone-friendly refrigerants
